

MSCI EAFE Adaptive Hedge to USD Index (USD)

The MSCI EAFE Adaptive Hedge to USD Index represents a close estimation of the performance that can be achieved by hedging the currency exposure of its parent index, the MSCI EAFE Index, to the USD, the "home" currency for the hedged index. The parent index is composed of large and mid-cap stocks across 21 Developed Markets (DM) countries*. The hedge ratio is the ratio (proportion) of each currency weight in the index that will be hedged each month and is calculated as the average of the four indicator-level hedge ratios calculated for each of the four currency indicators (Value, Momentum, Carry and Volatility).

For a complete description of the index methodology, please see [Index methodology - MSCI](#).
