

# MSCI USA Screened Index (USD)

The MSCI USA Screened Index is based on the MSCI USA Index, its parent index, and includes large- and mid-cap securities of the U.S. equity markets. The index is a free float-adjusted market capitalization weighted index that is designed to reflect the performance of companies that have better Environmental, Social and Governance (ESG) ratings relative to their sector peers, and to exclude companies that are involved in controversies and controversial business activities. The Index is designed for investors seeking a benchmark comprised of companies with above-average ESG profiles while avoiding companies incompatible with their values. Constituent selection is based on research provided by MSCI ESG Research.

## MSCI FACTOR BOX AND FaCS FRAMEWORK (Please refer to complete description of the MSCI FaCS methodology [here](#))

MSCI FaCS is a standard method for evaluating and reporting the Factor characteristics of equity portfolios. MSCI FaCS consists of Factor Groups (e.g. Value, Size, Momentum, Quality, Yield, and Volatility) that have been extensively documented in academic literature and validated by MSCI Research as key drivers of risk and return in equity portfolios. These Factor Groups are constructed by aggregating 16 factors (e.g. Book-to-Price, Earnings/Dividend Yields, LT Reversal, Leverage, Earnings Variability/Quality, Beta) from the latest Barra global equity factor risk model, GEMLT, designed to make fund comparisons transparent and intuitive for use. The MSCI Factor Box, which is powered by MSCI FaCS, provides a visualization designed to easily compare absolute exposures of funds/indexes and their benchmarks along 6 Factor Groups that have historically demonstrated excess market returns over the long run.
