

# MSCI ACWI Minimum Volatility (USD) 100% Hedged to CAD Index (CAD)

The **MSCI ACWI Minimum Volatility (USD) 100% Hedged to CAD Index** represents a close estimation of the performance that can be achieved by hedging the currency exposures of its parent index, the MSCI ACWI Minimum Volatility Index, to the CAD, the "home" currency for the hedged index. The index is 100% hedged to the CAD by selling each foreign currency forward at the one-month Forward rate. The index aims to reflect the performance characteristics of a minimum variance strategy applied to the large and mid cap equity universe across 23 Developed Markets (DM) countries and 24 Emerging Market (EM) countries\* around the world. The index is calculated by optimizing the parent index, in USD, for the lowest expected absolute risk (within a given set of constraints). Historically, the index has shown lower beta and volatility characteristics relative to the MSCI ACWI Minimum Volatility (USD) Index.

For a complete description of the index methodology, please see [Index methodology - MSCI](#).
