

MSCI UK IMI Adaptive Capped 2x Index (USD)

The MSCI UK IMI Adaptive Capped 2x Index is based on MSCI UK IMI, its parent index and captures large, mid and small-cap representation of the UK equity markets. The index follows a capping approach where the cap level on the constituent weights of the larger stocks at each rebalance is not explicitly specified but is instead determined by the pre-defined maximum weight multiple applied to the smaller (uncapped) constituents of the parent index. The cap level and the stocks to which it is applied can vary at each rebalance. This approach aims to make the index methodology scalable and robust for a wide range of indexes covering different size segments over time.

For a complete description of the index methodology, please see [Index methodology - MSCI](#).

SECTOR WEIGHTS

The MSCI UK IMI Adaptive Capped 2x Index was launched on Nov 23, 2015. Data prior to the launch date is back-tested test (i.e. calculations of how the index might have performed over that time period had the index existed). There are frequently material differences between back-tested performance and actual results. Past performance – whether actual or back-tested – is no indication or guarantee of future performance.

ABOUT MSCI

MSCI (NYSE: MSCI Inc.) strengthens global markets by connecting participants across the financial ecosystem with a common language.
