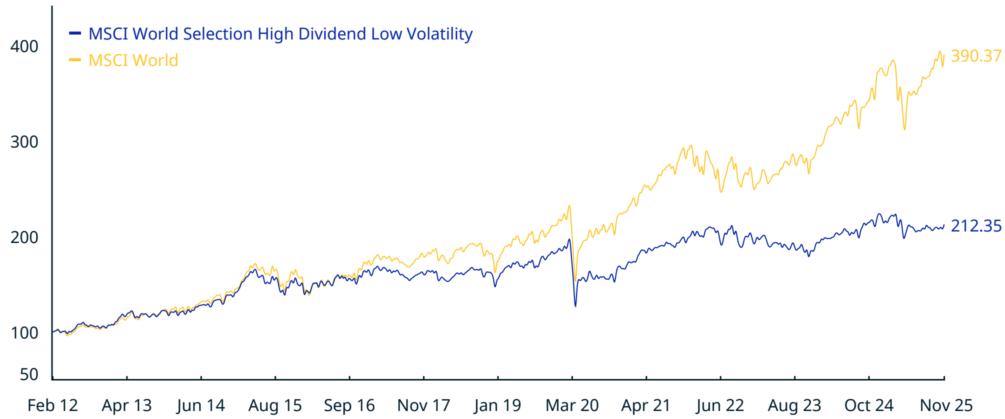
MSCI World Selection High Dividend Low Volatility Index (EUR)

MSCI World Selection High Dividend Low Volatility Index ('the Index') is constructed by combining regional indices: MSCI Selection North America High Dividend Low Volatility Index, MSCI Selection Europe High Dividend Low Volatility Index and MSCI Selection Pacific High Dividend Low Volatility Index. All the regional indexes are designed to represent the performance of a fixed number of securities with high dividend yield and quality characteristics and are inverse volatility weighted to achieve lower volatility.

For a complete description of the index methodology, please see Index methodology - MSCI.

CUMULATIVE INDEX PERFORMANCE — PRICE RETURNS (EUR) (FEB 2012 – NOV 2025)



ANNUAL PERFORMANCE (%)

Year	MSCI World Selection High Dividend Low Volatility	MSCI World
2024	10.93	24.81
2023	0.49	17.64
2022	-3.47	-14.19
2021	19.98	29.26
2020	-9.76	4.64
2019	22.50	27.49
2018	-6.56	-5.92
2017	-0.32	5.50
2016	7.89	8.47
2015	6.47	8.34
2014	16.96	17.21
2013	15.78	18.74

INDEX PERFORMANCE — PRICE RETURNS (%) (NOV 28, 2025)

					ANNUALIZED

[1] Last 12 months [2] Based on monthly price returns data [3] Based on EMMI EURIBOR 1M from Sep 1 2021 & on ICE LIBOR 1M prior that date

The MSCI ESG Leaders Indexes were renamed the MSCI Selection Indexes as of Feb 3, 2025.

The MSCI World Selection High Dividend Low Volatility Index was launched on Dec 20, 2022. Data prior to the launch date is back-tested test (i.e. calculations of how the index might have performed over that time period had the index existed). There are frequently material differences between back-tested performance and actual results. Past performance -- whether actual or back-tested -- is no indication or guarantee of future performance.

MSCI FACTOR BOX AND FaCS FRAMEWORK (Please refer to complete description of the MSCI FaCS methodology here)

MSCI FaCS is a standard method for evaluating and reporting the Factor characteristics of equity portfolios. MSCI FaCS consists of Factor Groups (e.g. Value, Size, Momentum, Quality, Yield, and Volatility) that have been extensively documented in academic literature and validated by MSCI Research as key drivers of risk and return in equity portfolios. These Factor Groups are constructed by aggregating 16 factors (e.g. Book-to-Price, Earnings/Dividend Yields, LT Reversal, Leverage, Earnings Variability/Quality, Beta) from the latest Barra global equity factor risk model, GEMLT, designed to make fund comparisons transparent and intuitive for use. The MSCI Factor Box, which is powered by MSCI FaCS, provides a visualization designed to easily compare absolute exposures of funds/indexes and their benchmarks along 6 Factor Groups that have historically demonstrated excess market returns over the long run.
