MSCI EAFE Enhanced Value Region Neutral Capped Index (CAD)

The MSCI EAFE Enhanced Value Region Neutral Capped Index is based on its parent index, MSCI EAFE Index, which includes large and midcap representation across 21 Developed Markets (DM) countries around the world, excluding the US and Canada, exhibiting overall value style characteristics. Region Neutrality is applied across three regions: Japan, Pacific ex Japan and Europe+Israel, with the weights of the defined regions set to match the region weights in the parent MSCI EAFE Index. The index is designed to represent the performance of securities that exhibit higher value characteristics relative to their peers within the corresponding GICS® sector. The value investment style characteristics for index construction are defined using three variables: Price-to-Book Value, Price-to-Forward Earnings and Enterprise Value-to-Cash flow from Operations. The index applies a 10% security capping, applied at each semi-annual rebalance.

For a complete description of the index methodology, please see Index methodology - MSCI.
